

Our Team

Our dedicated and experienced supportive care team members work side-by-side with the patient's current physician and include:

- Physicians and specialists
- Nurse Practitioners and CNAs
- Registered Nurses
- Spiritual care providers
- Social Workers
- Volunteers

About Islands Hospice

Islands Hospice believes that every one of us deserves the opportunity to write the closing chapter of our life with dignity, in peace, and in the comfort of home.

Since 2008, our team of physicians, nurse practitioners, nurses, nurse aides, social workers, chaplains, volunteers, and dedicated professionals has walked with and cared for thousands of patients and their loved ones through hospice, palliative, and supportive care programs.

Our team works with patients, 'ohana and medical teams on O'ahu and Maui to create a comprehensive plan of care to address each individual patient's medical, emotional, and spiritual needs.

Islands Hospice

HMSA

Supportive Care Program

HMSA Supportive Care Program

Islands Hospice is a proud partner of the HMSA Supportive Care Program which provides extra support and care to patients and families undergoing curative treatment for serious or life-threatening illnesses.

What can supportive care do for you?

Separate from hospice care, supportive care is provided in addition to ongoing medical treatment. Our program is centered on helping patients and families navigate the complexities of critical health issues, and achieve physical, emotional, and spiritual well-being.

In addition to your regular care, our patients have access to:

24-hour on-call medical services and telephonic nursing support

Medical equipment, supplies, and comfort medications with personalized support

Help navigating treatment plans

Spiritual support visits

Other caregiver assistance

Who is eligible?

The HMSA Supportive Care program accepts patients with a range of serious illnesses, including but not limited to, advanced cancer, class 3 or 4 congestive heart failure, and advanced COPD. If you or a loved one are managing a serious illness, please contact us directly to discuss eligibility.

How it works

The HMSA Supportive Care program is designed to support patients for 90 days during a 12-month period. Patients can also receive support from other community-based programs such as home health. At the end of Supportive Care services, patients may return to their usual medical care or transition to palliative or hospice care services based on their illness and medical needs.
